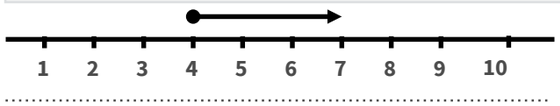
Multi-stage deterministic linkages and case definitions with diyar: : **CHEAT SHEET**

number_line objects

Series of real numbers on a number line.

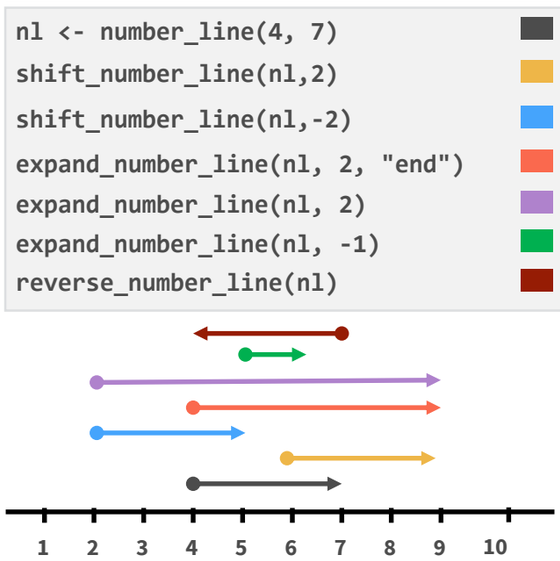
Stand alone S4 objects but also used in record and episode grouping

```
number_line(4, 7)
```



MANIPULATE NUMBER LINE OBJECTS

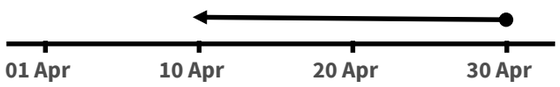
```
nl <- number_line(4, 7)
shift_number_line(nl,2)
shift_number_line(nl,-2)
expand_number_line(nl, 2, "end")
expand_number_line(nl, 2)
expand_number_line(nl, -1)
reverse_number_line(nl)
```



```
> number_line_width(nl)
[1] 3
> number_line_sequence(nl, 1)
[1] 4 5 6 7
> number_line_sequence(nl, .5)
[1] 4.0 4.5 5.0 5.5 6.0 6.5 7.0
> left_point(reverse_number_line(nl))
[1] 7
> start_point(reverse_number_line(nl))
[1] 4
> right_point(reverse_number_line(nl))
[1] 4
> end_point(reverse_number_line(nl))
[1] 7
```

Also supports objects that can be coerced to numeric values

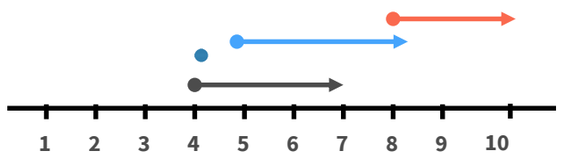
```
dates <- c("30/04/2019", "10/04/2019")
dates <- as.Date(dates, "%d/%m/%Y")
number_line(dates[1], dates[2])
```



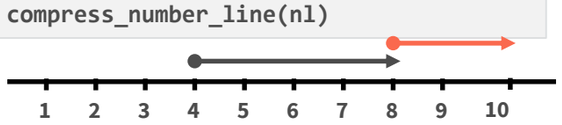
COMBINE NUMBER LINE OBJECTS

Overlapping number_line objects can be merged

```
n1 <- number_line(4,7)
n2 <- as.number_line(4)
n3 <- number_line(5,8)
n4 <- number_line(8,10)
nl <- c(n1, n2, n3, n4)
```

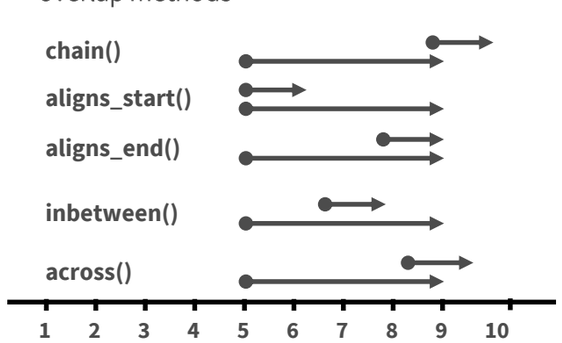


```
compress_number_line(nl)
```



```
compress_number_line(nl, collapse =T)
```

- overlap methods

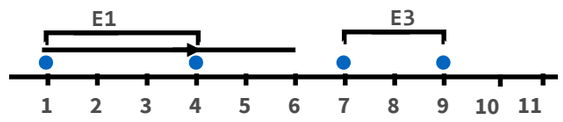


Episode grouping

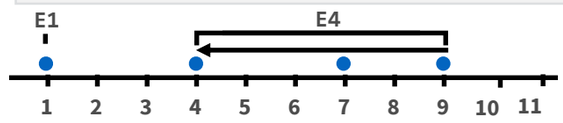
EPISODES FROM POINTS IN TIME

```
dates <- c("01","04","07","09")
dates <- paste(dates,"04/2019",sep= "/")
dates <- as.Date(dates, "%d/%m/%Y")

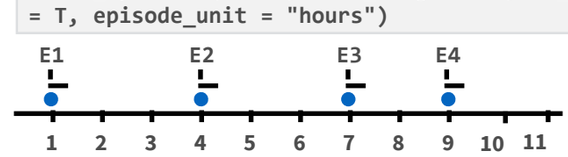
fixed_episodes(dates,
case_length = 5, to_s4 = T)
```



```
fixed_episodes(dates,
case_length = 5, to_s4 = T, from_last = T)
```



```
fixed_episodes(dates, case_length = 5, to_s4
= T, episode_unit = "hours")
```

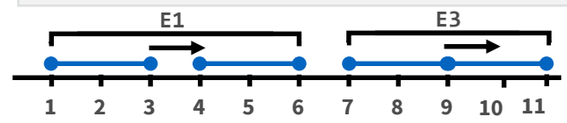


EPISODES FROM PERIODS IN TIME

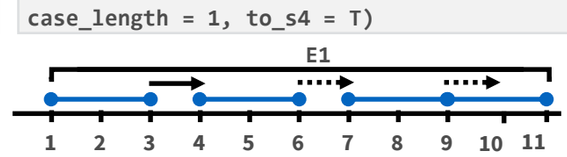
```
p <- as.number_line(dates)
p <- expand_number_line(p,2, "end")
periods <- p

fixed_episodes(periods,
 case_length = 0, to_s4 = T)
```

```
fixed_episodes(periods,
case_length = 1, to_s4 = T)
```

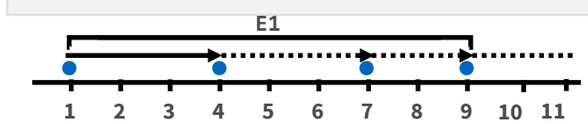


```
rolling_episodes(periods,
case_length = 1, to_s4 = T)
```

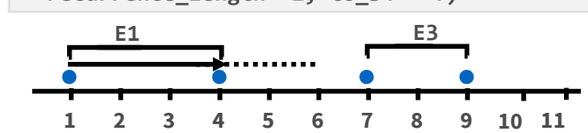


ROLLING EPISODES

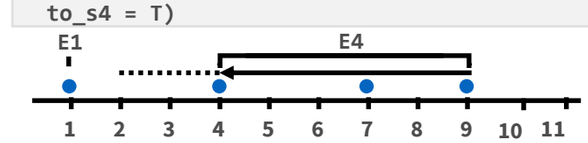
```
rolling_episodes(dates,
case_length = 5, to_s4 = T)
```



```
rolling_episodes(dates, case_length = 5,
recurrence_length =2, to_s4 = T)
```

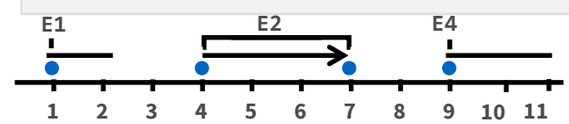


```
rolling_episodes(dates, case_length = 5,
recurrence_length =2, from_last = T,
to_s4 = T)
```

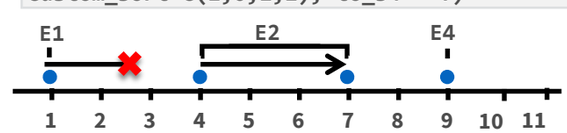


CONTROL CASE ASSIGNMENT

```
fixed_episodes(dates,
case_length = c(1,3,2,2), to_s4 = T)
```



```
fixed_episodes(dates, case_length =5,
custom_sort=c(1,0,1,1), to_s4 = T)
```



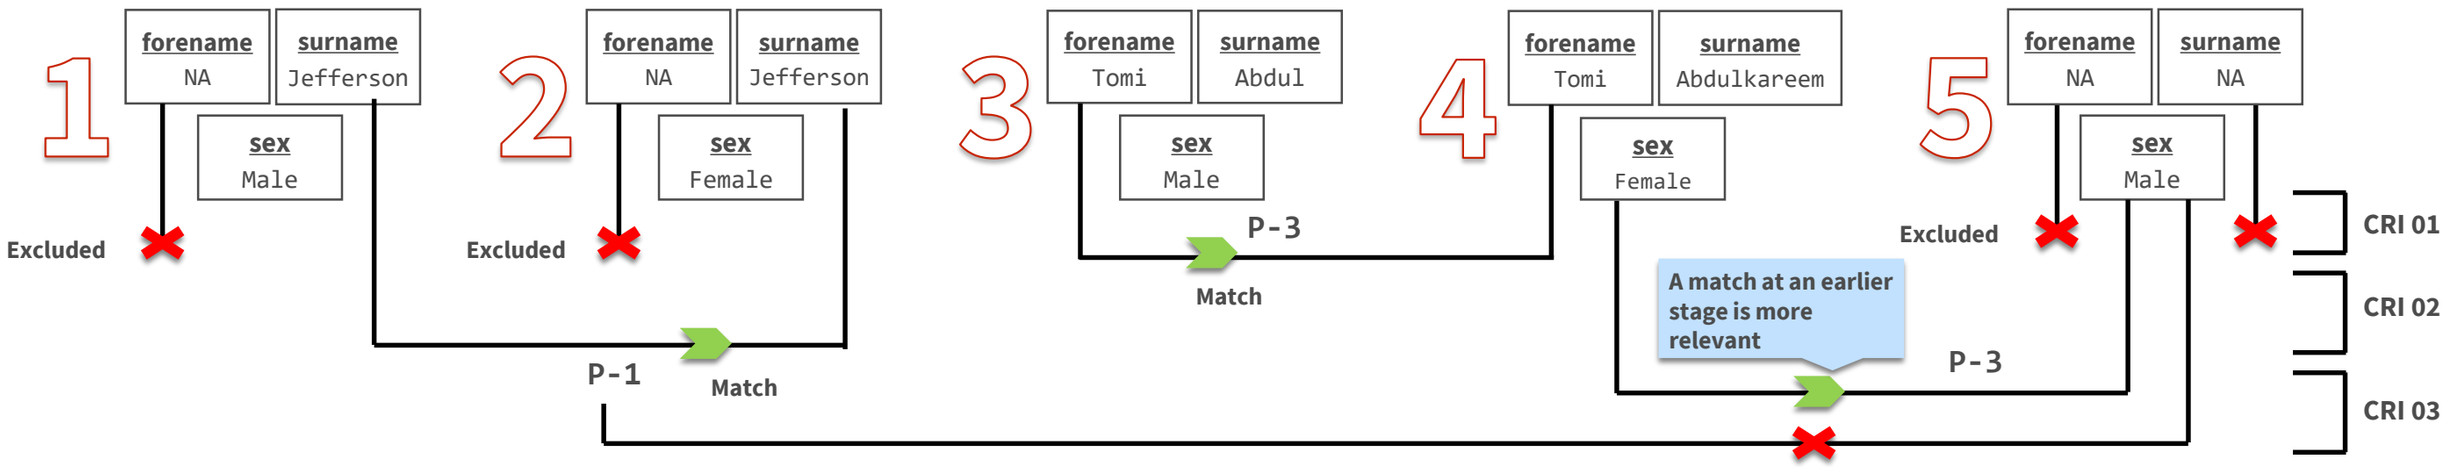
dashed lines – recurrence periods
solid – initial case period
round end – start of an episode
arrow head – end of an episode

Multi-stage deterministic linkages and case definitions with diyar: : **CHEAT SHEET**

Record grouping

- **Multi-stage deterministic linkage**
- **Relevance of each stage controlled by** `criteria`
- **Use** `sub_criteria` **for additional matching conditions**
- **Missing data handled with alternative matching** `criteria`
- **Record grouping separately for subsets of the dataset using** `strata`

```
record_group(diyar::patient_list_2, rd_id, c(forename, surname, sex), to_s4 = TRUE)
```



```
df <- Opes[c("department","date_of_birth","db_pt1","db_pt2","db_pt3")]
df$age <- dmy("02/11/2019") -  dmy(df$date_of_birth)
df$age <- round(as.numeric(df$age)/365)
```

```
df$age_range <- number_line(df$age, df$age +5, gid=df$age)
record_group(df, criteria = c(department, department),
sub_criteria = list("s1"=c("age_range"), "s2"=c("db_pt1","db_pt2","db_pt3")),
display = FALSE, to_s4 = TRUE)
```
